Welcome to this Revit Zone article on **Sheet Sets**

. In this short article we will show you how to create Sheet Sets. Although a relatively simple concept in the context of Revit's power and complexity, Sheet Sets are a really useful productivity tool that will speed up your output with regards printed material of PDF's.

Please note that the concept of Sheet Sets is universal in the world of Revit- ie it is applicable to Revit Architecture, Revit MEP and Revit Structure. So what are Sheet Sets. Basically they are named collections of Sheets. So why would you want to do this. Well, over the course of a typical project you are most likely going to generate many, many sheets. And periodically, you will need to print out (either physically or via PDF) some of these Sheets. You will do this for different purposes- ie presentation drawings for the Client, Services drawings for a Design Team Meeting, etc. Yes, you can select each sheet in turn by placing a tick in the check box when you come to print. But much more efficient is the creation of any number of "Sheet Sets"- which you can then just output by choosing the Sheet Set name at the time of printing.

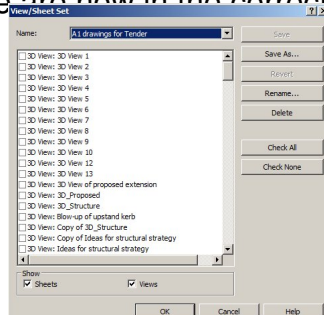

So let's show you how to do this by example. In the following image you will see the various Sheets, listed in the Project Browser.....

Let's say (for the sake of example) that I need to regularly print Sheet numbers 200 to 205 inclusive. This scenario is an ideal candidate for the use of Sheet Sets. So let's go ahead and create a named set. First of all select "Print" from the Application Menu....

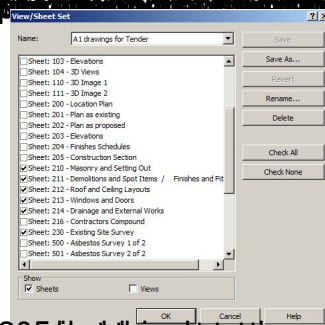

choices from the Print dialog box, select "Selected views/sheets" from the "Print Range"

delete this Sheet Set. We are now in the correct dialog box to actually create, use and

Save this Sheet Set. We are now in the correct dialog box to actually create, use and

Now that you have created the Sheet Set, you can use the 'Sheet Set' tool to create a new Sheet Set. To create a new Sheet Set, select 'Save As' and save the Set as

my new Sheet Set. For the purpose of this exercise, select 'Save As' and save the Set as

Sheet Set 5 from the 'File/Print' dialog box, and click 'OK' to save the Set. The 'Print' dialog box will then appear, and you will need to

that you have saved the project. The 'Print' dialog box will then appear, and you will need to
